## COMMENTS

seemed smaller than Eidolon  
different shape than Eidolon, species photographed on island by National Geo in 2008  
smaller fruit bat  
saw while having dinner on New Years Eve 31/12/96 - good meal and wine as well  
best guess from observation  
best guess from observation  
first heard and saw after leaving tent

did not see clearly but not like other Bioko quenons  
photo

glimpse on ground at night-definitely heard numerous times at night  
subject of research paper  
subject of research paper  
may have seen 1/96 caldera

a pair on beach at night - called ground beef by local (meaning meat that moves low on the ground)  
saw on trail at night

first seen by boat en-route from Malabo to Moraka in huge roost of hundreds of bats
